

Waste Management Software

P&L Software Systems Limited is the industry leader in waste management software. With over twenty years industry experience, we are the only developers who specialise purely in waste management software.

Our powerful, feature-rich Integrated Waste System (IWS) is used by most of the UK's major commercial and public-sector waste management operations, as well as throughout the world.

For skip and container waste management operations, our SKIP2+™ software provides an ideal, powerful, entry-level management programme.

As we are a waste management software company uniquely certified to ISO 9001:2008 standards, our customers benefit from high standards of service and support, including a 24/7 helpline, dedicated in-house training facilities and flexible on-site consultancy.

Products and services include:

IWS6™

Integrated Waste System (IWS) is the most widely used waste management software in the UK today. This industry-proven package is used by most of the UK's major commercial waste management operations and public sector customers – as well as many others worldwide.

The latest version, IWS6™ makes scheduling, monitoring and invoicing waste transactions simple. Record the details on easy-to-navigate drop-down screens and the powerful diary system will keep day-to-day track of your business. Enhanced reporting modules allow fast, accurate analysis. EC directives, environmental reporting, landfill tax calculations, VAT – IWS can handle it all.

IWS-mobile™

IWS-mobile™ takes IWS – the UK's premier waste management software – out on the road. It uses the latest GPRS satellite navigation technology for on-line mapping, calculating width, height and weight limits to create truck and HGV friendly routes. No more wasted time and fuel as your operatives search for the right road, while route history means you can keep a check on exactly where each vehicle is 24/7.

Customer details are collected electronically and updated automatically. Where necessary they can also

be amended via IWS-mobile's™ interactive touch/stylus sensitive display. Because you always know what your operatives are doing, you can make sure they carry out every task efficiently – on every trip – saving paper, and reducing queries and administration costs.

This exciting new piece of kit has a mobile phone, keeping drivers in close contact with you, while a camera is there to make a pictorial record of useful details. Although extremely sophisticated, with lots of features, these pdas are tough little customers, made to take plenty of use every day.

SKIP2+™

SKIP2+™ is the ideal entry-level management programme for busy skip and container waste management operations. Simple to set up and update, this stand-alone Windows®-based package provides complete order to invoice management for skip hire companies. Its powerful tools cover not only invoicing and billing, but specialised tasks such as permit management, custom tickets, transfer notes and automatic addressing from post codes. The live on-screen diary keeps users in full control of their skip movement and vehicle scheduling.

SKIP2+™ also offers superb features for weighbridge operators, with a range of specialised operations including waste and material classifications, multiple-stored tare weights, automatic container rental generation and easy definition of waste origins/destinations and tipping zones. Among the many advantages of SKIP2+™ is the simple management of Environment Agency reporting, while its flexible classification controls allow prices to be defined both by product and by container types.

P&L Maintenance Packages

Being certified to ISO 9001:2008 standards, we're proud of our levels of service and support with three-tiered maintenance support cover for IWS and SKIP2+™.

P&L Training

Our in-house customer training facility is fully air-conditioned and equipped and provides a superb venue for in-depth training. We offer a range of courses, which allow small groups to explore the full potential of our software packages.
