SKIPTM₊

SKIP2+™ is the ideal entry-level management programme for busy skip and container waste management operations.

Simple to set up and update, this stand-alone Windows®-based package provides complete order to invoice management for skip hire companies.

Its powerful tools cover not only invoicing and billing, but specialised tasks such as permit management, custom tickets, transfer notes and automatic addressing from post codes. The live on-screen diary keeps users in full control of their skip movement and vehicle scheduling.

SKIP 2+™ is ideal for weighbridge operators, with a range of specialised operations including waste and material classifications, multiple stored tare weights, automatic container rental generation and easy definition of waste origins/destinations and tipping zones.

Among the many advantages of SKIP2+™ is the simple management of Environment Agency reporting, while its flexible classification controls allow prices to be defined both by product and by container types.

Features at a glance:

- > Windows®-based interface
- > Integrates with other popular office software
- > Low cost entry level to IWS
